

PacketXpress

The Network Visibility Hub

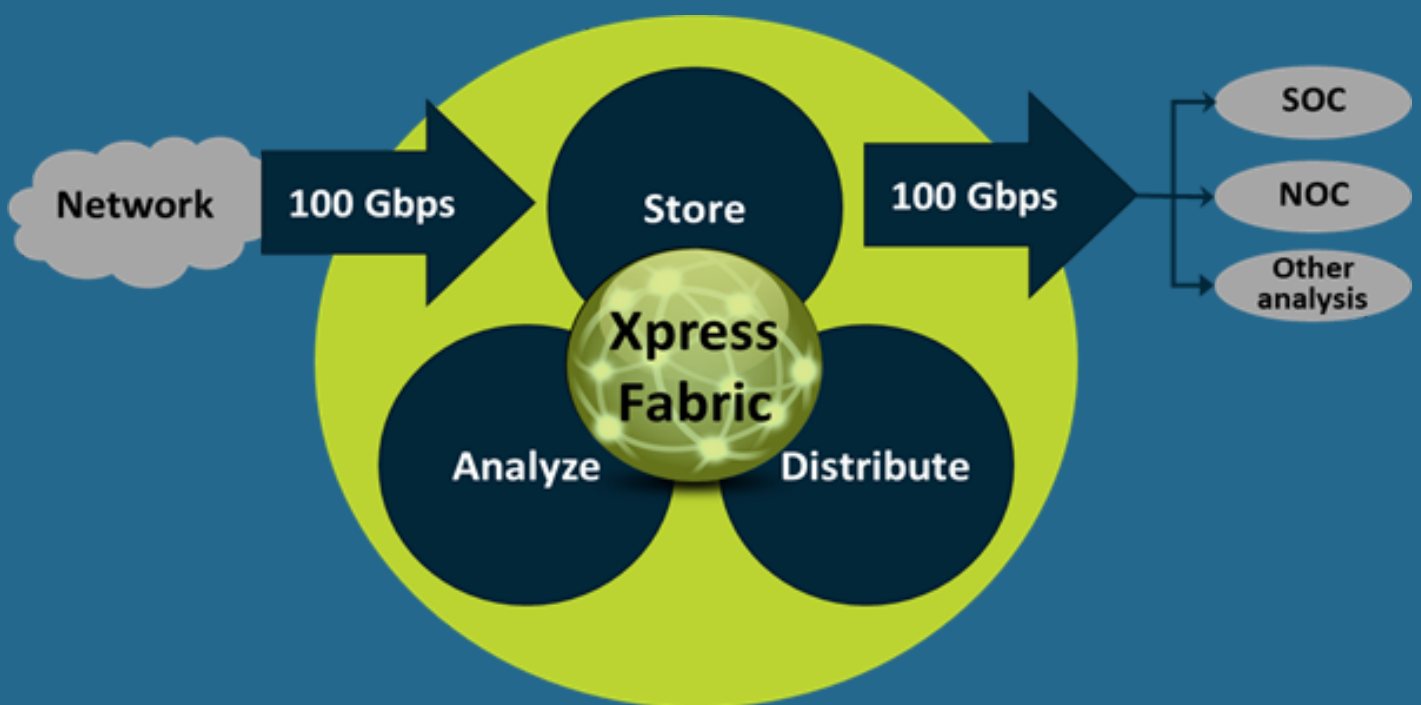

THE VISIBILITY HUB FOR ALL YOUR NETWORK & SECURITY MONITORING & ANALYSIS

WHAT IS PACKETXPRESS?

Axellio PacketXpress is an application-agnostic, open platform that captures, stores and forwards traffic for all your network and security monitoring. PacketXpress buffers all incoming traffic for more efficient processing and provides back-in-time packet analysis:

- Sustained 100 Gbps simultaneous capture and distribution
- Distribute traffic via standard APIs with no special hardware needed
- Virtualize any monitoring application, resulting in less hardware
- License your applications for average traffic not peak traffic rates
- Always-on, long-term on-disk-storage of all packets for pre- and post-event analysis

KEY FEATURES

Sustained 100 Gbps
 Simultaneous no-loss capture and distribution, with intake rates scalable to your monitoring requirements and deployment approach.

Always-on, long-term on-disk-storage for days weeks or months
 Scalable up to over 1 Petabyte onboard storage in a single 2U appliance. Access to all relevant traffic pre- and post-event for better insight.

Adaptive traffic distribution
 Up to 100 Gbps simultaneous traffic distribution to your existing monitoring ecosystem. Traffic buffering for any analysis application ensures reliable analysis .

Unprecedented density
 Our solution is in an economical, small formfactor at only 2U
